

ABSTRACT

A reusable shipping container for the transport of heavy and/or bulky objects is disclosed. In a preferred embodiment of the reusable-shipping container the carrying base of the container is made of a strong durable plastic like material. The reusable shipping container includes a cover made of a lightweight flexible material that is connected to the base in a detachable but secure fashion by securing mechanisms. In a preferred embodiment the securing mechanism can be a quick releasable clip type mechanism or a twist lock mechanism.
